London, United Kingdom – 11 February 2021 – NTT Ltd., the global technology services company, today releases its 2021 Hybrid Cloud Report, which highlights the critical need for business agility, and the role hybrid cloud has had on helping businesses achieve this.

Before Covid-19, many companies had embarked on digital transformation journeys, but the pandemic highlighted that many were not as agile as they had previously thought. The pandemic laid bare deficiencies in businesses' cloud infrastructure, security and network architecture capabilities, hindering their ability to adapt and remain agile.

The pandemic has forced a cultural mindset shift with global organizations adapting their agility plans from recovering infrastructure and applications to getting office-based workers set up and working from home. Despite this uncertainty, the pandemic has provided a significant opportunity to accelerate digital transformation initiatives.

The report, which conducted research with 950 decision-makers in 13 countries across five regions, highlighted the increasing reliance on technology and found that:

It is clear that hybrid cloud is now seen as critical to data-driven processes and real-time decisions both now and in the future.

During such an uncertain time, businesses are continuing to

tighten their purse strings and look to hybrid cloud to increase cost efficiency and drive the organization's overall performance. The report found that a more efficient total cost of IT operations is the biggest driver (41.3%) of hybrid cloud adoption, especially given the shift to a distributed workforce model where businesses now need to access data and applications in new, different and often complex ways.

In addition to this, the use of hybrid cloud is helping nearly a third of businesses (32.8%) improve the speed of deployment of applications and services in order to create operational efficiencies. After working with NTT to implement a hybrid IT infrastructure, Christophe Le Caignec, Head of IT Operations, at Lefebvre Sarrut Services, said: "Our infrastructure now lets us focus our time and resources on application development and lifecycle management, helping us to bring new services to market much more quickly."

Businesses, however, need to implement hybrid cloud in a way that will optimize environments to maximize efficiencies. This is why over half of organizations (52.7%) strongly agree on the need to engage with experts, such as managed cloud providers.

Beyond maximizing cost efficiencies, businesses are also charged with changing attitudes to security and compliance and the complexities of implementing hybrid cloud. The report found that almost half of respondents (46.3%) claim that the difficulties in managing data security is the greatest barrier to adopting hybrid cloud. To overcome these barriers when working in such complex environments, organizations must choose the right environment that will securely host their mission-critical applications across public and private clouds; and work with a partner who understands the industries they're working in to ensure compliance.

The report found that network performance and a shortage of skills were also regarded as sizeable barriers to hybrid cloud adoption. Both, if not appropriately addressed, when implementing the cloud, could undo the benefits it offers.

Rob Lopez, Executive Vice President, Intelligent Infrastructure

at NTT Ltd., comments “As businesses look to navigate the new year, they must look to hybrid cloud environments that are optimized for agility, security and supported by the right network architecture while also meeting compliance requirements. This is the foundation upon which cloud is successful and will enable businesses to weather any form of disruption that comes their way.”

Industry collaboration and working with external experts will provide businesses with the right knowledge and skills to set up their hybrid cloud environments for agility. When we asked our respondents about the types of partner used, 72.1% of businesses said they engaged with systems integrators, while 58.2% engaged with specialist information security consultants or MSSPs, highlighting the importance of security to cloud deployments.

To find out more about NTT and our hybrid cloud services, visit our website

NTT Ltd. is a leading global technology services company. Working with organizations around the world, we achieve business outcomes through intelligent technology solutions. For us, intelligent means data driven, connected, digital and secure. Our global assets and integrated ICT stack capabilities provide unique offerings in cloud-enabling networking, hybrid cloud, data centers, digital transformation, client experience, workplace and cybersecurity. As a global ICT provider, we employ more than 40,000 people in a diverse and dynamic workplace that spans 57 countries, trading in 73 countries and delivering services in over 200 countries and regions. Together we enable the connected future. Visit us at hello.global.ntt.
