Excelitte captures data from spreadsheets, stores it securely in a database to be accessed using biometrics all in less than 40 seconds.

PUBLISHED APR 9, 2021
BY [PRESSAT](#)

Temsconsu launches Excelitte an automation tool that captures data from spreadsheets, then solves the usual problems with using spreadsheets such as accidental deletion or transformation, security, manipulating/analysing large volumes of data, and duplication of the same spreadsheet data.

Excelitte as a digital/IT product provides an automated and very effective way of transferring or importing data from data spreadsheets or other similar sources straight into a database.

Excelitte imports or captures your data from a spreadsheet or other similar sources and transforms it into a web application in an instant, literally in seconds. Example 1 million rows of data can be captured and transformed in approximately 40 seconds.

Avoid spending hundreds of thousands of dollars and waiting for months or years to migrate or move your data into a database web-based software application, visit us at www.excelitte.com and start a free trial today.
