Designed to deliver revolutionary features and user experiences, the Galaxy Z Fold2 marks a key milestone in Samsung's foldable journey. To give more users access to the latest foldable innovations, Samsung is now bringing many of the features on the Galaxy Z Fold2 and more to the device that started it all – the Galaxy Fold.

From improved productivity capabilities to unique camera experiences, the latest update¹ promises to take the Galaxy Fold to the next level. Here's everything you need to know about the update.

Whether you are multitasking or working on the go, the latest update helps you get things done faster with the Galaxy Fold.

Instead of spending time finding the apps you need, App Pair lets you launch up to three of your favorite apps together in your preferred split screen layout.

This feature can be accessed via the Edge Panel, which combines the Multi-Window Tray with Edge Panel for improved convenience. All you need to do is swipe the side of the screen² to see up to 22 of your favorite apps. The arrangement of the Multi-Active Window layout can now also be done horizontally, giving you more flexibility for multitasking.

If you need more screen space to work with, the updated Samsung DeX lets you easily connect the Galaxy Fold to a Smart TV wirelessly.³ All you need to do is tap on the Samsung DeX icon in the quick panel.

Once the two devices are connected, you can customize the

second screen to suit your needs with screen zoom and various font size options. You can even use the Galaxy Fold as a touch pad to control the second display with multi-finger gestures.

The Galaxy Fold's unique form factor is designed to help you capture photos and videos exactly the way you want. The latest update brings even more flexibility to this innovative camera experience.

Shooting with Auto framing is like having a dedicated cameraman always by your side. Depending on how many people are in front of the camera, the feature automatically zooms in or out to ensure the Galaxy Fold captures everything. It can even track motion to keep the subject centrally framed.

Capture View Mode gives you the option to check your shots as you shoot. It shows you up to five of the latest photos or videos on the left side of the Main Screen, while giving you a preview of your next shot on the other half.

Dual Preview enhances collaboration between the subject and the photographer by showing a preview of the image on both the Cover and Main Screen of the Galaxy Fold. This feature also works with video and can be activated in Pro Video mode.

The latest update lets you maximize the power of the Galaxy Fold's rear camera, even when you are taking selfies. Simply open the Camera app on the Cover Screen and activate Rear Cam Selfie. This feature allows you to use the high-resolution rear camera and its wide range of advanced functions for selfies.

Pro Video Mode on the Galaxy Fold now comes with more shooting (21:9 ratio and 24fps video) and assistant functions (histogram, focus peaking), while Single Take lets you capture up to 15 seconds of content to deliver a selection of best moments in photos and video.

Forget about repeating long, complicated Wi-Fi passwords to your friends and family. With the Galaxy Fold, you can now directly share the password of the Wi-Fi you are connected to

trusted Galaxy devices that are near you.

The updated Wi-Fi feature can also show you the speed of nearby connections (Very Fast, Fast, Normal Slow) to help you easily find one that's suitable.

1 Specific launch date and available features may vary by market and region.

2 The Edge Panel is placed on the right side of the screen by default but can be changed to the opposite side in Settings.

3 Samsung DeX wireless connection is available on smart TVs that support Phone Screen mirroring only. (For the optimal experience, use on Samsung Smart TVs launched 2019 or later.)
