

Samsung Internet 13.0 Takes Your Browsing Experience to the Next Level

PUBLISHED DEC 2, 2020
BY [SAMSUNG GLOBAL](#)

Samsung Electronics today announced a new update to Samsung Internet, its fast, easy and reliable web browser. Samsung Internet 13.0 introduces a series of new features and enhancements designed to offer users a better and safer browsing experience.

“At Samsung, we’re always optimizing our products and services to offer the best experience to our users,” said Du Kim, VP and Head of Web R&D Group, Mobile Communications Business, Samsung Electronics. “Our lives are increasingly lived online, as people try to stay informed and connected, so we wanted to make it easier for everyone to enjoy the best the internet has to offer with peace of mind, knowing you can count on us to keep you safe.”

These days, it’s hard to know which website you can trust. Samsung Internet 13.0 offers a new permission request UI that will display a warning message if a website seems malicious and is attempting to trick users into allowing notifications. And since we know how much privacy means to our users, Secret mode allows them to automatically clear their browsing history as soon as all their Secret mode tabs are closed. A new Secret mode icon will also be displayed on the address bar as part of the Samsung Internet 13.0 update, so that it’s easier to know when it’s switched on. For more information about Secret mode, check out the new About Secret mode section.

We introduced a series of new features and enhancements to make Samsung Internet even more user-friendly:

New Application Programming Interface (API) modules are now available for Samsung Internet 13.0, including WebRequest,

Proxy, Cookies, Types, History, Alarms, Privacy, Notifications, Permissions, Idle and Management. Developers can use these APIs to build extensions and contact the Samsung Internet team to validate, approve and add their extension to the Samsung Internet browser. For more details, please you're an existing Samsung Internet user, you will receive a notification telling you a new version is available. You can also download the latest version of Samsung Internet browser on the Google Play Store or Galaxy Store.
